

2026 OpenRx Formulary

Drexli

Understanding Your Formulary

A formulary is a list of prescribed medications, pharmacy care products, services, or supplies selected based on safety, cost, and effectiveness. The list includes both brand-name (CAPITALIZED) and generic prescription medications (lowercase).

You and your doctor can use the formulary to select the most cost-effective prescription medications. This guide indicates whether a medication is covered or any special rules apply. This is not a complete list of covered medications and is subject to change. If you do not see your medication on this list, please visit Drexli's website or call our Help Desk at 844-728-3479. Please note that coverage of OTC (Over-The-Counter) product may vary based on your plan's design.

In this drug list, some medications are noted with letters next to them to help you see which ones may have coverage requirements or limits. Your benefit plan decides how these medications may be covered.

PA Prior Authorization — Your doctor needs to provide additional information to Drexli to determine coverage.

ST Step Therapy — You must try one or more medication(s) before a higher-cost medication can be covered

SP Specialty — Medication is considered specialty. Specialty medicines are typically high-cost medicines that can often only be obtained at a specialty pharmacy. Specialty drug coverage may differ based on the plan.

AL Age Limit — Some medications have age restrictions for coverage due to safety or effectiveness concerns, requiring doctors to provide justification for use outside the specified age range.

ACA Affordable Care Act — the medication is part of the Affordable Care Act and might be free (\$0 cost) as a preventive medication. Examples of preventive medications are those for quitting smoking, some vaccines, bowel prep for procedures, and birth control. Please see your plan for additional details.
